Please read this manual very carefully before wearing your helmet and keep it in a safe place.

For a correct use and for your safety, please pay attention to following instructions. The main function of the helmet is to protect your head in case of impact. This helmet is made to absorb some of the energy of a blow by partial destruction of its component parts and, even though damage may not be apparent, any helmet which has suffered an impact in an accident or received a similarly severe blow or other abuse should be replaced. To maintain the full efficiency of this helmet, there must be no alteration to the structure of the helmet or its component parts.

The size selection of the helmet is crucial to ensure the safety of the user. Never should use a helmet that is too small or too large in relation to the size of the head. To purchase a helmet is important that you try it: make sure the helmet fits perfectly to the head, there should be no gap between the helmet and the head; make some movements of rotation (left and right) with the helmet on the head(closed) this should not shake; it's important that the helmet is comfortable and involving the entire head.
